# 1. Introduction

## 1.1. Background

Access Environment was commissioned by Commercial Estate Group Ltd (CEG) to conduct a Stage 1 Environmental Report of Unit 2&3 Callflex Business Park, Golden Smithies Lane, Wath-Upon-Dearne, Rotherham, S63 7ER (the 'site' or 'property'). This report is based solely on a desk based study of the site areas.

## 1.2. Objectives and Scope of Works

The objective of the Environmental Review was to determine the existence and likely extent of any potential environmental liabilities associated with the current and historical use of the site. The Environmental Review included the following key activities:

- A desk based review of the site to determine the perceived environmental risks and liabilities relating to the current site use;
- A review of available historical information (including historical maps and available on-line local authority planning records) to ascertain historical use of the site and its immediate surroundings;
- A review of available geological, hydrogeological and hydrological information (obtained from British Geological Society maps and the Environment Agency) to establish the environmental sensitivity of the site;
- A review of available information from public databases (Landmark Historical Maps), the Local Authority and EA (as available within reporting timeframe);
- Preparation of a summary report outlining the findings of the review, a preliminary assessment of potential environmental risks and liabilities and recommendations/requirements for further work as required.

## 1.3. Limitations

This report presents the findings from the reviewed information provided by public databases and the client. A site inspection was not undertaken and the report is desk based only.

The findings and opinions in this review are based upon information obtained from the sources outlined above. Information obtained from third parties has been accepted at face value; Access Environment believes this information to be reliable but does not guarantee its accuracy.

A detailed compliance assessment, assessment of the condition and maintenance of the infrastructure/plant equipment in use at the site, or assessment/analysis of any provided site investigation data are not within the scope of works for this review.

Unless otherwise stated in this report, the assessment assumes that the site will continue to be used for the current purpose without significant change.

The assessed potential environmental risks and conclusions provided within this report are based on the information available for review at the time of reporting and do not account for any unknown issues due to data gaps.

This report assumes that potential environmental compliance and contamination/environmental damage issues associated with tenant/operator activities will remain the responsibility of the site tenant(s)/operator. Access Environment assumes that the tenant/operator financial covenants have been reviewed and accepted by the Client. It should be noted by the Client that should a tenant/operator become insolvent/go into administration, any environmental responsibilities or liabilities may be transferred to the property Landlord.

All aspects of this report should be read in the context of the report in its entirety; Access Environment cannot be held responsible for excerpts used outside the context of this report in its entirety.

This report is not intended to be a recommendation to proceed (or not to proceed) with the Transaction or any aspect of it.

### **1.3.1. Limiting Conditions**

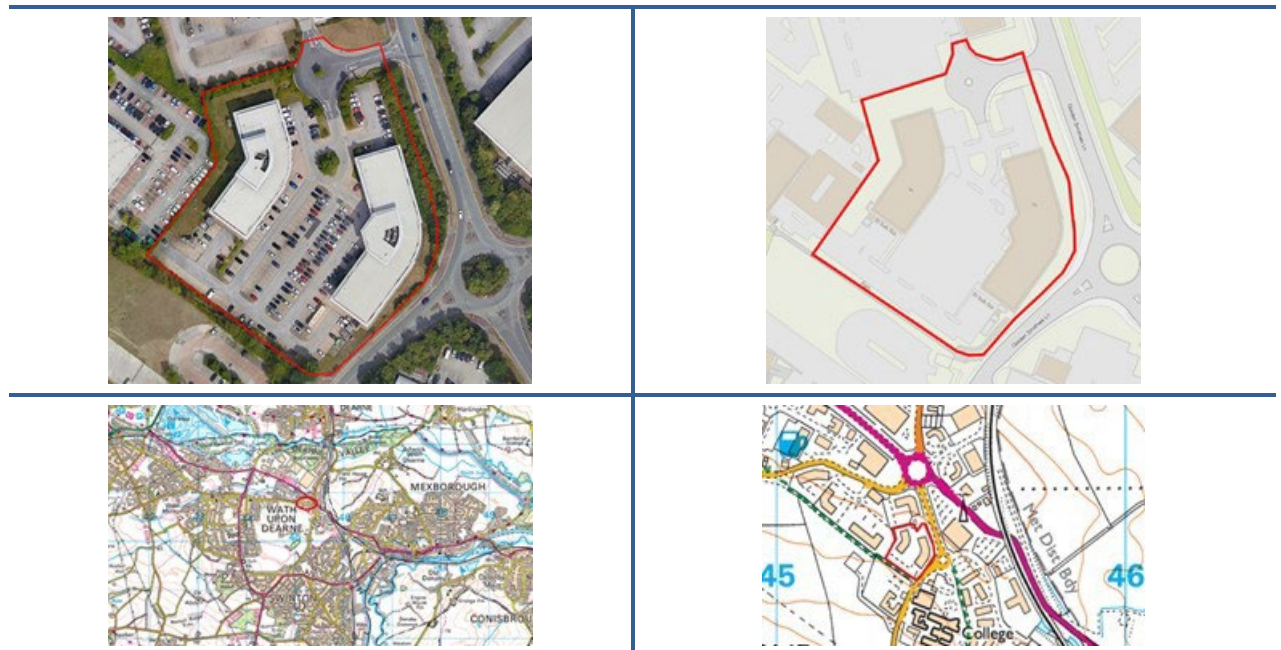

The scope of the works did not extend into an inspection of the tenants, buildings or the site.

## **1.4. Reliance**

This review is confidential to and can be relied upon by the addressees of the report and the named parties in any associated letter of reliance. We accept no responsibility of any nature to third parties to whom this report is made known; any such party relies on the report at their own risk.

## 2. Site Profile

### 2.1. Site Location

<b>Site Address</b>	S63 7ER		
<b>Site Area</b>	1.6ha		
<b>Grid Reference</b>	SE453005		
<b>Access</b>	Golden Smithies Lane, located north east		
<b>Units</b>	The internal layout of the buildings were not inspected. There are two building units with the larger Unit 2 in the east and the smaller Unit 3 in the west.		
<b>Layout</b>	<p>Both office Units have a 'C' footprint. The larger, Unit 2, in the east and the smaller, Unit 3, in the west.</p> <p>The site is fenced with c.2m post and wire fencing with a gated access in the north. Bitumen and brick paviour surfacing car parking is located primarily between the buildings and to the south with a smaller car parking area to the north of Unit 3. There is some peripheral landscaping primarily in the east and to the west of the site.</p> <p>Two sub-stations are located to the south of each building within a service area/</p>		
<b>Topography</b>	31m AOD in the South sloping gently down to the north at 27.5m AOD		
<b>Construction</b>	<p>The buildings are two storey office buildings constructed with steel portal frame with composite panel and glass cladding and slightly sloped roof. A central area of the roof is used for plant including HVAC systems.</p> <p>There are no basements.</p>		
<b>Internal</b>	The internal areas were not inspected.		
<b>Surface Cover</b>	<b>Buildings</b>	20%	Located centrally in the east and west of the site area.
	<b>Hardstand</b>	70%	Predominantly bitumen surfacing as car parking and access roads.
	<b>Landscape</b>	10%	Grass and planted peripheral verges most predominant in the east and west.

### 2.2. Site Operations

#### 2.2.1. Operational Processes

The site is used as offices and was/is occupied by G4S, Skills for Business and Equans.

### 2.2.2. Consents and Authorisations

There are no current environmental consents or authorisations for any processes within the Study Area.

### 2.2.3. Site Infrastructure

No service plans have been provided for review. The following provides a basic description of selected key infrastructure relevant to the site.

#### Water Supply and Wastewater

<b>Water Supply and Wastewater</b>	The sewerage and water undertaker for the site is Yorkshire Water.
<b>Drainage</b>	Foul water drainage is understood to be connected to the public sewer system, which is likely to flow north and then along Golden Smithies Lane. No drainage plans have been provided. However, drainage from the roof areas is likely to be combined with the sewer system. Drainage from the external areas is achieved by a sequence of gulleys, standard drains and channel drains which flow north.
<b>Oil Interceptors/ Grease Traps</b>	There are no known interceptors, grease traps or silt traps located at the properties.
<b>Trade Effluent</b>	No trade effluent is recorded or likely to be produced by the current tenant operations, and no significant/regular vehicle washing is known to be undertaken at the site.

#### Electrical Supply

<b>Sub-stations/ Transformers</b>	There are two sub-stations located on the site to the south of each of the respective Units.
<b>Alternative Power Supplies</b>	No back-up power supplies or emergency generators are known to be present on any external areas of the site.

### 2.2.4. Materials Handling & Storage

There is no external bulk storage or the storage of hazardous materials undertaken at the site.

There is no evidence of spillages, stains or leaks at any location across the site (based on aerial maps and street view).

### 2.2.5. Waste Management and Disposal

Given the office nature of the units it is anticipated that waste generated by the tenants will predominantly comprise general and recyclable materials (non-hazardous controlled waste). The waste is likely stored within the service areas located externally and to the south of each respective building unit.

### 2.2.6. Additional Observations

Item	Description
Invasive or Dangerous Species	A detailed invasive plant species survey was not within the scope of this assessment.
Gas Protection Measures	None noted from aerial images or streetview images of the site.
Environmental Monitoring Wells	None observed.
Known Environmental Incidents	None reported.

## 2.3. Planning Status

A review of planning data from Rotherham Councils on-line planning portal/records was undertaken. The following pertinent planning applications relate to the property:

The following relevant planning applications were observed.

Item	Description
RB1998/0011EZ	Erection of three office buildings [Granted 04/03/1999]

There are no available documents relating to this planning application. The aerial image from 1999 indicates that the Callflex Business Estate and the surrounding area has undergone significant earth and foundation enabling works to create a platform for subsequent development. It is understood that this and the surrounding areas were redeveloped from a post demolition but derelict state in the mid-1990s as part of a major European Regional Development Fund and Derelict Land Grant Fund project. The project was managed via an Enterprise Zone Planning Scheme where the Manvers, Wath Main Colliery and the Wath railway marshalling yard were *'demolished, cleared of contamination and landscaped'* (Wikipedia). There is no available information on the actual nature and extent of any remedial works undertaken. Work at this time would have been undertaken in accordance with the Environment Protection Act.

## **2.4. Neighbouring Land Uses**

The surrounding area forms part of the Callflex Business park and comprises mainly offices, with additional industrial estates located to the north and east. Agricultural land is located from 100m to the south west and over 200m to the north east.

## 3. Environmental Condition

### 3.1. Site History

The site history has been determined from a review of available historical maps, Google Earth images, internet sources and additional research (as detailed in Appendix B). The text below describes significant historical activities at the site and in the local surrounding area. Map extracts are presented in Appendix D.

#### On Site

The earliest available historical maps date back to 1855, which indicate that the site was already partially developed with a railway line located bisecting the northern portion of the site (c.20% of site area) and with the Dearne & Dove Canal within and bounding the southern portion of the site. The remainder of the site area appeared to be undeveloped.

The undeveloped portions of the site were subsequently developed by 1892 with colliery infrastructure, including a main colliery mine building straddling the north west of the site and some ancillary unspecified buildings in the south and east. The Adwick Road was developed over the canal and under the railwayline in the east of the site.

The northern portion of the site remained un-developed, until the 1930 map edition, when further colliery buildings had been constructed. The buildings appeared to be related to some processing activities (main processing area was off site further north/north west).

By 1957, all of the ancillary colliery buildings covering the majority central footprint of the site had been demolished and replaced with Manvers Workshop and Stores (three large rectangular building structures. The rail, canal, road and colliery buildings in the north were still present at this time.

By 1976, the canal located within the southern boundary of the site had been filled in (including its entirety off-site) and levelled.

The site was subsequently redeveloped in the mid 1990s where all further man made structures (colliery, road, road tunnel, rail and buildings) were demolished, the site levelled and readied for development. The two current office buildings were subsequently developed from 1999 to 2002 (along with the surrounding adjacent estate and the new road to the east).

<1855	Railway in the north, canal (within a cutting) and road to east. Remainder of site undeveloped.
<1892 - <1930	Available areas of the site developed with Colliery buildings
<1930 - 1989	New buildings developed within the central area marked as 'Manvers Workshop and Stores'
<1989 - 1999	All man made structures on site demolished and site (and surrounding area) prepared for development.
1999 - 2002	Development of current office buildings, car parking and access.

#### Additional

Various sources place the initial development of the Manvers Colliery around 1867. The development of the By-products Plants (north of the site) including coke, gas scrubbing, benzol, washing and sulphur plants being developed in the 1910s. From 1945, the Manvers Colliery was absorbed into British Coal Board, where mining operations were terminated at Manver (the No.1 260m shaft, directly west, to the Barnsley Coal Seam was exhausted in 1942) but processing operations were maintained as a central resource for nearby mine sites. The site was reported to have closed and demolished in 1989.

Planning and search history confirm the planning for the buildings and that the regeneration of the site and area was undertaken as part of a new enterprise planning scheme funded by European Development Fund and Vacant Land Fund.

#### Off Site

From the earliest available map (dated 1855) the area was partially developed with railway and canal and set within a growing industrial context. A summary of the key potentially contaminative activities include:

- Manvers Main Colliery is primarily located directly west and north of the subject site (<1892 – 1988). This comprised a large main mine shaft, multiple air shafts, coke ovens, by-products plant (closed 1981) and settlement ponds. The main colliery buildings to the west were demolished and redeveloped with colliery store buildings. The whole of the colliery area was subsequently developed into office and business estates in the mid 1990s and a short period of dereliction.
- Associated with the colliery were a number of shallow waste heaps (presumably colliery spoil) located to the south, south east and north east of the site.

### 3.2. Previous Site Investigations

There are no available previous site investigation reports for the site.

Argyll Environmental produced a Site Solutions Combined environmental report (desk based) for the site on 12 January 2024 for Reed Smith LLP (one for each building). The report highlighted further action required in respect to contaminated land. The risk of contaminants and the overall risk of contaminants was given as moderate to high on account of the former use associated with the colliery and infilled canal.

### 3.3. Regulatory Review

Information regarding potential hazards associated with environmental regulatory controls in relation to the site and surrounding area (within 250m) is summarised below. This information is primarily derived from available Environment Agency records and the Landmark Envirocheck report.

Aspect	Details
<b>Contaminated Land Register Entries</b>	There are no recorded entries on or adjacent to the sites
<b>Discharge Consents</b>	There are two discharge consents located within 250m of the site. These relate to discharges from relating to Breedon Trading and tarmac Topmix, located 225m north east with no supplied rate of revocation.
<b>Pollution Incidents</b>	No current on site or within 250m.
<b>Pollution Control Permits</b>	There are no facilities within 250m.
<b>Registered Radioactive Substance Consents.</b>	No current on site or within 250m
<b>Landfill Sites</b>	On Site: None Off site: Rotherham Council operated a historical site for the disposal of inert waste 90m and 140m north of the site (relating to Chock and Coking Plant site respectively) with no further details.
<b>Waste Management/ Transfer/ Treatment Sites</b>	No current on site or within 250m
<b>Hazardous Substance Consents</b>	Cert Octavian, at Unit 3 Ardwick Park (located 200m south east) operate a COMAH site and have a Planning Hazardous Substances consent for the storage of extremely flammable gas (LPG) dated from 2009.
<b>BGS Recorded Mineral Sites</b>	Manvers main Colliery No1 Pit shaft is located directly west of the site boundary, while No.4 Pit is located 20m north west, Manvers Main Colliery located 40m north west (See Coal Authority Report also).
<b>Fuel Station Entries</b>	None on site or within 250m

### 3.4. Regulatory Consultation

Full regulatory consultation has been requested, but is not available for this report edition.

However, available Local Authority and EA records have been reviewed. A consultation has not been undertaken with the local petroleum officer as no observations have been made or information provided to indicate the possible presence of petroleum storage at the property historically or current.

### **3.5. Radon/ Natural Contamination**

The property is in the lower probability radon area (1 to 3% of homes are estimated to be at or above the action level) and no protection measures are considered necessary in the construction of new dwellings or extensions. No radon protection measures are required.

### **3.6. Coal Mining**

A Coal Authority CON29M Coal Mining Report (26 February 2024) is provided in the Appendices. The report indicates that:

- The property is in a surface area effected by historic underground mining in 5 seams of coal at 90m to 620m depth, last worked in 1966. Any movement in the ground should have ceased.
- There are two mine shafts recorded off site and within 20m of the western site boundary. At least one of these shaft has details of being filled in 1988 and plugged and capped in 1990. It is likely that mitigation was undertaken for both, given the redevelopment works for the estate.
- The Coal Authority has not received any damage notices or claims in respect to property damage and has no record of any mine gas emissions.

### 3.7. Potential Sources of Contamination

The following table highlights all potential historical contamination sources identified within 250m. The source rating indicates their relative polluting potential (not to be confused with risk).

Ref	Dist (m)	Name	Potential Contamination	Source Significance Rating
1	On	Railway	The railway line ran across the northern section of the site running east/west. Its primary function appears to have been colliery related, which may well have also resulted in the transport of by-products. It is possible that residual contamination may be present within this area. However, the area was subject to extensive demolition, earthworks movement, re-levelling, and possible remediation in the mid 1990s as part of the area regeneration. It is considered likely that any significant contaminants have been removed as part of these works, although there is no available direct evidence to this effect.	Low to Moderate
2	On	Colliery	Colliery buildings occupied the central and northern portions of the site. The central buildings are likely to have been mainly ancillary buildings and stores, while the northern buildings appeared to be related to the nearby by-products plant. Both areas formed part of the enterprise regeneration zone and were subject to planning permission in 1999. While there are no details of the investigation or remediation works undertaken, evidence of extensive earthworks and ground stripping are noted on the aerial image from 1999. Further, a number of waste management facilities (from 500m north) were linked to remediation contractors around the same time as regeneration of the site and there is evidence that the mine shafts were filled and managed in the mid 1990s. If any residual contamination remained after early development then it will also have been spread across the site area as part of creating a foundation platform.	Low to Moderate
3	On	Canal (and possible infilled road tunnel)	The Canal located in the south of the property (within a shallow cutting) was infilled in the early 1970s. Further, the railway tunnel in the east of the site was filled around 1990. There is no available data to indicate how this canal or rail tunnel had been infilled, although it is possible that available colliery waste/overburden may have been used given its availability. The area like the rest of the site was subject to extensive earthworks and regeneration activity within the enterprise zone. However, it is possible that there is some residual contaminants within the canal.	Moderate
4	Off	Colliery / Coke Oven	The directly adjacent areas to the west and north formed part of the main colliery which included coke ovens and by-products activities. However, these were subject to a derelict land grant and European Regeneration Fund to allow for the Enterprise allocated area to be regenerated. Aerial images from 1999 highlight the earthworks and regeneration activity undertaken at the time to ensure suitability for redevelopment. However, there is no specific data in respect to investigation or mitigation undertaken. It is possible that there is localised contamination present.	Low to Moderate

Any potential source considered with a negligible or very low source rating is eliminated from the risk assessment process. Any sources classed as low or greater are taken forward to the conceptual site model and preliminary risk assessment.

## 4. Site Sensitivity

### 4.1. Geology

Type	Thickness (m)	Description
Made Ground	Not known	Possible some colliery wastes, particularly in the south.
Drift		Alluvium: Clay, Silt, Sand & Gravel
Solid		Oaks Rock Sandstone / Penine Middle Coal Measures

#### **On Site Records**

There are no BGS Geosure records available for the site or surrounding area.

**Sensitivity Rating: Moderate** (the made ground, sand and sandstone will be permeable and will allow migration. However, any contaminant migration is likely to be restricted by extensive level of hardstand surface covering across the site.

### 4.2. Hydrogeology

The superficial aquifer is recorded as being unproductive while the sandstone bedrock is a principal aquifer. The aquifer is classified as highly vulnerable.

There are no current abstractions or well records on the site. There are no current active groundwater abstractions on or within 1km of the site.

The groundwater hydraulic gradient will be down hill to the north west.

**Sensitivity Rating: Moderate** (The underlying geological conditions are generally of moderate permeability, but with some restrictions resulting from man-made structures).

### 4.3. Hydrology

There are no recorded or noted water features on the site.

There are some minor ponds/water features noted from 100m the site located north east. The nearest river is the Brook Dyke located c.460m north west. This sits within the Dearne darfield to River Don catchment which has a moderate ecological potential water classification (EA, 2022).

The nearest Water feature is the River Mersey, which is a tidal river and is located from c.100m south west. Any surface water will either flow into the combined sewer which flows east along Sefton Road or across the hardstanding surface and infiltrate through landscaped areas into the underlying filled tidal dock or directly into the River Mersey.

**Sensitivity Rating: Low** (there are no clear pathways for surface water migration).

### 4.4. Flood Risk

<b>Rivers</b>	The EA Flood Risk Management Portal indicates that the property is within a very low risk area (chance of flooding of less than 0.1% each year), except within the south west site boundary which is low risk (chance of flooding is between 0.1% and 1% each year).
<b>Surface Water</b>	The EA Flood Risk Management Portal indicates that the overall property is within a very low risk area (chance of flooding is between 0.1% and 1% each year). However, small portions of the car park, in particular to the east of unit 2 are identified as having a high risk (greater than 3.3% chance each year) of localised surface water flooding.

	EA indicate that flooding from surface water is difficult to predict as rainfall location and volume are hard to forecast. In addition, local features can greatly affect the chance and severity of flooding.
<b>Historical/ Reported</b>	There was no indication of any recent flood events at the sites.

Surface Water Flood Map

River Flood Map

### 4.5. Ecology/Heritage

There are no ecologically sensitive areas within 500m of the site.

**Sensitivity Rating: Low** (No significant ecological features within 500m)

### 4.6. Other

The surrounding area is generally developed with industry and offices, with some agricultural land from c.100m to the south.

## 5. Conceptual Model and Risk Assessment

The qualitative preliminary conceptual model and risk assessment is based on best current guidance and practice. Any non-viable source-pathway-receptor is eliminated, while any viable pathway is considered in terms of likelihood of an event and potential severity of that event.

The qualitative preliminary risk assessment is based on the site in its current condition.

Ref	Dist (m)	Source	Pathway	Receptor	Likelihood	Severity	Risk
1	On	Railway	Direct Contact, Inhalation	Humans (site users, maintenance workers)	Low	Mild	Low
			Direct Contact	Buildings	Low	Mild	Low
			Permeable strata	Humans / Buildings	Low	Mild	Low
			Permeable strata	Groundwater	Low	Mild	Low
2	On	Colliery	Direct Contact, Inhalation, permeable strata	Humans (site / maintenance workers)	Low	Moderate	Low to Moderate
			Permeable strata	Groundwater	Low	Mild	Low
3	On	Canal and Road Tunnel	Direct Contact, Inhalation	Humans (site users, maintenance workers)	Low	Moderate	Low to Moderate
			Direct Contact	Buildings	Low	Mild	Low
			Permeable strata	Humans / Buildings	Low -medium	Moderate	Low to Moderate
			Made Ground	Groundwater	Low	Mild	Low
4	Off	Colliery / By-Products	Direct Contact, Inhalation, permeable ground	Humans (site users, maintenance workers)	Low	Mild	Low

The overall environmental risk is considered to be low to moderate.

### 5.1. Description

The following is a commentary on each of the risk assessments.

- The railway running through the site served a colliery and possibly by-products plant for over 100 years. It is possible that even with the major site regeneration in the mid 1990s that there may be some residual contamination, it is likely that this is minor. Further, the site has almost complete covering with hard cover and humans are unlikely to come into direct contact. The environmental risk is considered to be low.
- The colliery buildings occupied the site which, were on the whole, understood to have been workshops and stores with perhaps the exception in the north of the site where the buildings were more associated with the nearby By-Products plants (located primarily north and north west). The site was subject to an extensive regeneration project in the mid 1990s funded by the Derelict Land Fund and the European Regeneration Fund. Aerial images of the time highlight extensive earthworks and regeneration operations, while waste management records highlight remedial contractor facilities located from 500m indicating remedial works were undertaken within the area. The site was also then subject to a planning application and requirements of the enterprise zone for construction of new buildings from 1999 (although there are no available records of environmental conditions). The balance of probability is that any significant contamination that may have been present on site has been managed. However, without solid evidence, it should be presumed that there may be some residual contamination. The extensive hardstanding across the site will restrict any direct contact by humans, and reduce any migration of possible contamination via surface water. The risk is considered low to moderate.
- The canal and the road tunnel under the former railway line have been infilled. It is possible that this has been achieved using colliery waste/overburden given the activity in the area at the time. The canal was filled in the early 1970s, while the road tunnel was infilled in the 1990s as part of the large scale area regeneration project. The infilled canal was also subject to the regeneration project and was subsequently levelled to provide an overall footprint for development in the mid 1990s. The subsequent planning application for office development on the site was granted in 1999 and the buildings developed shortly after, but not within the footprint of the former canal. This area was developed with a hard

surfaced car park. It is possible that there is some residual contamination still present within the canal, but (a) it is unlikely to be significantly gas generating, particularly after 50 years; and (b) the area has hardstanding cover preventing any human contact; and (c) the building footprint is further north. It is anticipated that the infilling of the tunnel in the east of the site was managed within the regeneration scheme and the new road development project and will have undertaken in accordance with best practice at this time. The risk is slightly higher because of the lack of information leading to greater uncertainty and is considered to be low to moderate.

4. The offsite colliery comprised coal workings, mine shafts and by-products activities. This was primarily to the north, but also west of the site. The by-products activities are down hydraulic gradient and have been subject to extensive regeneration and likely treatment of residual contamination, although it is possible that some low level contamination remains. The mine shafts have been shown to have been made safe and capped. None of the buildings are located directly over any of the former treated mine shafts. The risk is considered to be low.

## 6. Conclusions

On the basis of the information provided for review and continued site use:

The subject site was developed as part of the main Manvers Colliery from 1867 which included ancillary buildings such as stores and workshops and possible by-products related buildings. The site also had a railway, road and canal running through. After the coal was exhausted from the underlying main mine in the 1940s, most of the site was used for storage/workshops. The site (and overall colliery) was subsequently closed and demolished by 1989 and lay derelict until European Development and Regeneration funding as well as Derelict Land Funding was made available to regenerate the site and entire area to allow suitable redevelopment with business, leisure and educational facilities. Regeneration works were undertaken in the mid 1990s. The subject site was then subject to a planning application under the enterprise zone requirements in 1999 with the current buildings developed shortly after and by 2002.

There is no direct evidence of investigation or remediation, there are aerial images from 1999 which highlight the extensive earthworks and ground improvement works which had been undertaken. Further, waste management records from facilities greater than 500m from the site (but within the regeneration area) show that remediation contractors were active at the time of the regeneration. It is likely that any possible significant contamination has been managed. However, there is the possibility that some residual contamination may still exist.

The overall environmental risk at the site is low moderate.

The site is not known to be registered as contaminated land by the local authority and a potential 'contamination linkage' with the significant possibility of significant harm (SPOSH) to human health, non-human receptors or controlled waters has not been identified.

Subject to continued current use (with no below-ground works being undertaken), the level of environmental risk associated with the site is assessed to be acceptably low for the current use. However, any works that require to be undertaken below ground or any significant change at the site should include a detailed risk assessment and possible geo-environmental intrusive investigation to satisfy likely planning conditions/requirements.

### 6.1. Residual Liability

The filling of the docks appears to have been undertaken to allow subsequent docklands development and hence it is unlikely that there will be residual environmental liability. However, the lack of data in respect to the subsequent development of the business estate is resulting in some uncertainty.

### 6.2. Financial Security

On the basis of the information provided for review, subject to the implementation of the recommendations outlined below and continued current use, the site can be considered acceptable security for funding.

## 7. Recommendations

The recommendations associated with the findings of the review are summarised in the tables below:

### 7.1. Site Owner Recommendations

	Recommendation	Reasoning	Timeframe
1	Consultation with Rotherham Council to obtain site records and advice in respect to planning and environmental records.	Obtain further data to refine the risk assessment.	Pending

### 7.2. Tenant Recommendations

There are no tenant recommendations.

### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

# Historical Mapping Legends

## Ordnance Survey County Series 1:10,560

	Gravel Pit		Sand Pit		Other Pits
	Quarry		Shingle		Orchard
	Owlers		Reeds		Marsh
	Mixed Wood		Deciduous		Brushwood
	Fir		Furze		Rough Pasture
	Arrow denotes flow of water		Trigonometrical Station		
	Site of Antiquities		Bench Mark		
	Pump, Guide Post, Signal Post		Well, Spring, Boundary Post		
	Surface Level				
	Sketched Contour		Instrumental Contour		
	Main Roads		Minor Roads		
	Sunken Road		Raised Road		
	Road over Railway		Railway over River		
	Railway over Road		Level Crossing		
	Road over River or Canal		Road over Stream		
	Road over Stream				
	County Boundary (Geographical)				
	County & Civil Parish Boundary				
	Administrative County & Civil Parish Boundary				
	County Borough Boundary (England)				
	County Borough Boundary (Scotland)				
	Rural District Boundary				
	Civil Parish Boundary				

## Ordnance Survey Plan 1:10,000

	Chalk Pit, Clay Pit or Quarry		Gravel Pit
	Sand Pit		Disused Pit or Quarry
	Refuse or Slag Heap		Lake, Loch or Pond
	Dunes		Boulders
	Coniferous Trees		Non-Coniferous Trees
	Orchard		Scrub
	Coppice		
	Bracken		Heath
	Rough Grassland		
	Marsh		Reeds
	Saltings		
	Building		Glasshouse
	Sloping Masonry		Pylon
	Electricity Transmission Line		Pole
	Cutting		Embankment
	Standard Gauge Multiple Track		
	Standard Gauge Single Track		
	Siding, Tramway or Mineral Line		
	Narrow Gauge		
	Geographical County		
	Administrative County, County Borough or County of City		
	Municipal Borough, Urban or Rural District, Burgh or District Council		
	Borough, Burgh or County Constituency Shown only when not coincident with other boundaries		
	Civil Parish Shown alternately when coincidence of boundaries occurs		
	BP, BS Boundary Post or Stone		Pol Sta Police Station
	Ch Church		PO Post Office
	CH Club House		PC Public Convenience
	F E Sta Fire Engine Station		PH Public House
	FB Foot Bridge		SB Signal Box
	Fn Fountain		Spr Spring
	GP Guide Post		TCB Telephone Call Box
	MP Mile Post		TCP Telephone Call Post
	MS Mile Stone		W Well

## 1:10,000 Raster Mapping

	Gravel Pit		Refuse tip or slag heap
	Rock		Rock (scattered)
	Boulders		Boulders (scattered)
	Shingle		Mud
	Sand		Sand Pit
	Slopes		Top of cliff
	General detail		Underground detail
	Overhead detail		Narrow gauge railway
	Multi-track railway		Single track railway
	County boundary (England only)		Civil, parish or community boundary
	District, Unitary, Metropolitan, London Borough boundary		Constituency boundary
	Area of wooded vegetation		Non-coniferous trees
	Non-coniferous trees (scattered)		Coniferous trees
	Coniferous trees (scattered)		Positioned tree
	Orchard		Coppice or Owlers
	Rough Grassland		Heath
	Scrub		Marsh, Salt Marsh or Reeds
	Water feature		Flow arrows
	Mean high water (springs)		Mean low water (springs)
	Telephone line (where shown)		Electricity transmission line (with poles)
	Bench mark (where shown)		Triangulation station
	Point feature (e.g. Guide Post or Mile Stone)		Pylon, flare stack or lighting tower
	Site of antiquity		Glasshouse
	General Building		Important Building

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## 10k Raster Mapping

Published 2000

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

## VectorMap Local

Published 2023

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Yorkshire

Published 1892

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

## Large-Scale National Grid Data

Published 1993

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

## Appendix E Coal Authority Mining Report

The Coal  
Authority

# CON29M

## coal mining report

UNIT 2&3, CALLFLEX BUSINESS PARK, GOLDEN SMITHIES LANE, ROTHERHAM,  
SOUTH YORKSHIRE, S63 7ER

### Known or potential coal mining risks

Past underground coal mining	Page 5
Future underground coal mining	Page 5
Mine entries	Page 6
Withdrawal of support	Page 7

### Further action

These additional reports can give further detail on the risks identified:

- Mine entry plan and data sheets

For more information please see our **Further action reports** on page 10

### Professional opinion

According to the official mining information records held by the Coal Authority at the time of this search, evidence of, or the potential for, coal mining related features have been identified. In view of the coal mining circumstances we would recommend that any planned or future development should follow detailed technical advice before beginning work on site. Please see **page 3** for further details on **Future development**.

# Professional opinion

## Mine entries

The enquiry boundary shows the approximate location of the disused mine entry/entries referred to in this report. Property owners have the benefit of statutory protection (under the Coal Mining Subsidence Act 1991). This contains provision for the making good, to the reasonable satisfaction of the owner, of physical damage caused by disused coal mine workings including disused coal mine entries. A leaflet setting out the rights and obligations of either the Coal Authority or other responsible persons under the 1991 Act can be obtained by visiting [www.coal.gov.uk](http://www.coal.gov.uk). Please note this Act is not valid where coal was worked or extracted by virtue of the grant of a gale in the Forest of Dean, or any other part of the Hundred of St. Briavels in the county of Gloucester.

If you wish to discuss the relevance of any of the information contained in this report, you should seek the advice of a qualified mining engineer or surveyor. If you or your advisor wishes to examine the source plans from which the information has been taken, these are available to view, at our Coal Authority head office in Mansfield. To book an appointment please call **01623 637 225**. Should you or your advisor wish to carry out a physical investigation that may enter, disturb or interfere with any disused mine entry, prior permission must be sought from the owner. For coal mine entries, the owner will normally be the Coal Authority.

The Coal Authority, regardless of responsibility and in conjunction with other public bodies, provide an emergency, 24 hour call out facility in coalfield areas to assess the public safety implications of mining features (including disused mine entries). To report an emergency you can call **0800 288 4242**.

## Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

**MINE GAS:** Please note, if there are no recorded instances of mine gas within the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

If you are looking to develop, or undertake works, within a coal mining development high risk area your Local Authority planning department may require a Coal Mining Risk Assessment to be undertaken by a qualified mining geologist or engineer. Should you require any additional information then please contact the Coal Authority on **0345 762 6848** or email **cmra@coal.gov.uk**.

# Detailed findings

Information provided by the Coal Authority in this report is compiled in response to the Law Society's CON29M Coal Mining enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL.

The Coal Authority owns the copyright in this report and the information used to produce this report is protected by our database rights. All rights are reserved and unauthorised use is prohibited. If we provide a report for you, this does not mean that copyright and any other rights will pass to you. However, you can use the report for your own purposes.

## 1 Past underground coal mining

The property is in a surface area that could be affected by underground mining in 5 seams of coal at 90m to 620m depth, and last worked in 1966.

Any movement in the ground due to coal mining activity associated with these workings should have stopped by now.

## 2 Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

## 3 Future underground coal mining

The property is not in an area where the Coal Authority has received an application for, and is currently considering whether to grant a licence to remove or work coal by underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

## 4 Mine entries

Within, or within 20 metres of, the boundary of the property there are 2 mine entries, the approximate positions of which are shown on the enquiry boundary plot. For reasons of clarity, mine entry symbols may not be drawn to the same scale as the plan.

Our records disclose the following information:

445400-004. No treatment details.

445400-003. was filled in December 1988 and plugged and capped in September 1990.

This information is based on the information that the Coal Authority has at the time of this enquiry.

Based on the Coal Authority's knowledge of the mining circumstances at the time of this enquiry, there may be unrecorded mine entries in the local area that do not appear on Coal Authority records.

## 5 Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

## 6 Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

## 7 Present opencast coal mining

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

## 8 Future opencast coal mining

There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

## 9 Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

## 10 Mine gas

The Coal Authority has no record of a mine gas emission requiring action.

## 11 Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out procedures.

## 12 Withdrawal of support

The property is in an area where notices to withdraw support were given in 1946.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

## 13 Working facilities order

The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

## 14 Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

# Statutory cover

## Coal mining subsidence

In the unlikely event of any coal mining related subsidence damage, the Coal Authority or the mine operator has a duty to take remedial action in respect of subsidence caused by the withdrawal of support from land or property in connection with lawful coal mining operations.

When the works are the responsibility of the Coal Authority, our dedicated public safety and subsidence team will manage the claim. The house or land owner ("the owner") is covered for these works under the terms of the Coal Mining Subsidence Act 1991 (as amended by the Coal Industry Act 1994). Please note, this Act does not apply where coal was worked or gotten by virtue of the grant of a gale in the Forest of Dean, or any other part of the Hundred of St. Briavels in the county of Gloucester.

If you believe your land or property is suffering from coal mining subsidence damage and you need more information on what to do next, please use the following link to our website which sets out what your rights are and what you need to consider before making a claim.

## Coal mining hazards

Our public safety and subsidence team provide a 24 hour a day, 7 days a week hazard reporting service, to help protect the public from hazards caused by past coal workings, such as a mine shaft or shallow working collapse. To report any hazards please call **0800 288 4242**. Further information can be found on our website: [www.gov.uk/coalauthority](http://www.gov.uk/coalauthority).

# Glossary

## Key terms

**adit** - horizontal or sloped entrance to a mine

**coal mining subsidence** - ground movement caused by the removal of coal by underground mining

**Coal Mining Subsidence Act 1991** - the Act setting out the duties of the Coal Authority to repair damage caused by coal mining subsidence

**coal mining subsidence damage** - damage to land, buildings or structures caused by the removal of coal by underground mining

**coal seams** - bed of coal of varying thickness

**future opencast coal mining** - a licence granted, or licence application received, by the Coal Authority to excavate coal from the surface

**future underground coal mining** - a licence granted, or licence application received, by the Coal Authority to excavate coal underground. Although it is unlikely, remaining coal reserves could create a possibility for future mining, which would be licensed by the Coal Authority

**mine entries** - collective name for shafts and adits

**mine gas** - reports of alleged mine gas emissions received by the Coal Authority within the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded

**payments to owners of former copyhold land** - historically, copyhold land gave rights to coal to the copyholder. Legislation was set up to allow others to work this coal, but they had to issue a notice and pay compensation if a copyholder came forward

**shaft** - vertical entry into a mine

**site investigation** - investigations of coal mining risks carried out with the Coal Authority's permission

**stop notice** - a delay to repairs because further coal mining subsidence damage may occur and it would be unwise to carry out permanent repairs

**subsidence claim** - a formal notice of subsidence damage to the Coal Authority since it was established on 31 October 1994

**withdrawal of support** - a historic notice informing landowners that the coal beneath their property was going to be worked

**working facilities orders** - a court order which gave permission, restricted or prevented coal mine workings

## Further action reports

**Mine entry plan and data sheets** - give additional information on mine entries recorded on a piece of land. To order this report use the same boundary as the CON29M report and a member of our team will contact you to confirm the mine entries to include in this bespoke report.
