# **EXECUTIVE SUMMARY**

The survey undertaken to Howe Lane Farm/Stag Farm, Howe Lane, Binfield, Bracknell., RG42 5QS consisted of a management survey and was undertaken in accordance with HSE publications HSG264 Asbestos: The Survey Guide.

The survey was carried out by Casa Environmental Services Limited and was commissioned by FRP Advisory Trading Ltd Care of Connix Surveyors.

The purpose of the survey was to locate the presence and extent of any asbestos bearing materials as far as is reasonably practical within the scope of a survey of this type.

This survey report enables the client to manage any ACM's within the building in order to prevent accidental exposure to asbestos during normal use or during maintenance activities.

14 samples of suspected ACMs were taken during the survey.

Upon analysis ACMs were found or presumed in the form of:

- Cement Moulded Products
- Cement Profiled Sheet
- Putty

Items containing or presumed to contain ACMs were found in the following locations:

- Main site/External areas/External/E01
- Main site/External areas/External/E01
- Main site/Open area/Ground Floor/008
- Main site/Open area 4/Ground Floor/011

<u>Inaccessible Areas</u> Please note the following areas will require a second phase visit to discover whether any additional ACMs are present. (Areas not accessed during the course of the survey have been discussed and agreed with Paul Nixon).

- Main site/External/External areas E01 Sampling of soils was excluded from the scope of this Asbestos

  Management Report. We understand that this has been investigated by TRC Companies Limited as part of the ground investigation prepared under separate cover Presumed amosite.
- Main site/External/External areas E01 Caravan and park home excluded from the scope of the survey due to continued occupation At the request of Paul Nixon
- Main site/Ground Floor/Store 003 No access gained within Bill electrics due to live status Presumed chrysotile
- Main site/Ground Floor/Switchroom 002 No access gained within rusted electrical switchgear due to live status Presumed chrysotile

# Scope of the Survey

Management survey to 2 dilapidated agricultural buildings and two static caravans.

# Excluded Areas (Areas Outside the Scope of the Survey)

All other areas.

|                                                                                                                                                                     | Document Revision Table |                                                                                         |             |           |  |  |  |  |  |  |

## INTRODUCTION

# **Survey Objective**

This survey is a Management Survey as defined in the HSE publication HSG264 Asbestos: The Survey Guide.

Its purpose is to identify any asbestos based materials, as far as is reasonably practical and record the location, extent and condition of these materials in order that this report can assist in preventing accidental exposure to asbestos by building occupiers. Occupiers may be people working in the building on a day to day basis, visitors or maintenance and refurbishment staff.

During the survey it is possible that minor intrusive measures are needed to access areas where ACM's may exist.

The survey will usually involve the need to take samples of suspect materials and have them analysed by an Accredited Laboratory to determine the presence or absence of asbestos.

A combination of sampling and presuming of ACM's may be used as detailed in HSG264 guidelines.

This survey report presents the details of all ACM's located within the scope of the management survey, Analysts results and recommendation as to any action required to manage the materials safely.

## Plans of Inspected Areas

Plans are provided for guidance as to the location of any identified ACMs and non-ACMs. They are intended to assist along with photographs and written descriptions in giving an appreciation of the location and extent of any ACMs, areas of non-access and the approximate areas of sample points. They are not necessarily entirely accurate or to scale.

## **Site Description**

The site consists of an agricultural site.

# <u>Liability</u>

No liability is accepted to anyone using the information contained in this report other than to the Casa Environmental Services Limited client who commissioned the survey.

This document is not to be used by a third party without the written permission of Casa Environmental Services Limited.

We accept no responsibility should you choose not to act upon any recommendation contained within this report or for the consequences of not doing so.

This report may not be reproduced except in full and with the approval of Casa Environmental Services Limited and the client.

# SURVEY METHODOLOGY

This survey has been undertaken in accordance with Casa Environmental Services Limited surveying procedures which comply with HSE auidance document HSG264.

During the survey materials suspected of containing asbestos have been bulk sampled as have materials that are very similar in appearance to asbestos.

We have not undertaken negative sampling i.e. undertaken any bulk sampling to materials that are obviously or unlikely to contain asbestos, such as plasterboard, timber, fibreglass or modern vinyl floor coverings.

Collected samples are forwarded to a UKAS accredited laboratory for analysis in accordance with procedures detailed in HSG248 The Analysts Guide for Sampling Analysis and Clearance Procedures published by the HSE.

The subsequent Analysts Test Certificates are included as a part of the survey report.

Following Analysis each incidence of asbestos along with any presumed asbestos and non-accessed areas are detailed in the positive section of the report (Non accessed areas are presumed to contain ACM's until proven otherwise).

Samples analysed that have no asbestos content are listed in the negative section of the report.

Each incidence of asbestos is listed in the report along with the following additional information, general comments, observation and recommendation, a photograph and material risk assessment scores. All as per HSG264 requirements.

The positive and negative sections of the report along with annotated plans of the survey area and analysts certificate form the asbestos register for the property or structure.

The report itself does not constitute a management plan.

As per HSE Guidance document 'HSG248 The Analysts Guide', the sampling of debris in not a recommended exercise except for in specific circumstances where the spread of asbestos from a substantial recent release incident is being investigated. Sampling is also not advised due to the technical difficulties (eg efficiency of collection methods) and surface deposit/settled dust variability (ie representativeness of potential spread). Where dust sampling for asbestos is carried out, results should be interpreted with caution. Occasional random asbestos fibres in settled dust cannot be considered to represent 'widespread or significant' contamination and should not be reported as such. Any positive results should be investigated further within a planned exercise, while negative results relating to minimal samples within a vast space should also be treated with caution & not be taken to 'prove' a space as clear from fine asbestos fibres.

## IMPORTANT POINTS TO NOTE RELATING TO THIS SURVEY AND REPORT

This survey was a Management survey.

It may not contain details relating to all asbestos within the building. The duty holder therefore should commission a Refurbishment / Demolition Survey prior to the commencement of any works of this type.

The survey was limited to areas that could be accessed at the time the survey was being undertaken.

We are unable to accept any responsibility for not discovering asbestos that may be present in cavities, under floors, above fixed ceiling or in other voids that could not be accessed within the scope of a management survey. We are unable to report on concealed spaces that may exist within the building where the presence and extent is unknown due to inaccessibility or lack of knowledge of the structure.

It is a possibility that some ACMs may not have been identified due to the wide variety of uses of asbestos in building construction and the complexity of certain buildings. Manufactured materials that contained asbestos was very diverse and responsibility therefore cannot be accepted for loss or damage resulting from non-recognition of materials which are later found to have an asbestos content.

Some decorative coatings contain very small quantities of asbestos which may not be homogeneous. They may have been installed from different batches or may have been repaired at different periods.

Samples taken from such coatings therefore may not necessarily be representative of all of the coating.

Bulk samples are only taken from materials which appear, in the surveyor's opinion, to be likely to contain asbestos.

Enclosed areas such as boilers, flues, ducts etc. which cannot be accessed without the use of specialised equipment have not been included.

We have not inspected areas which would have involved causing damage to decoration, building fabric or fixtures and fittings.

We are unable to accept responsibility for misinterpretation of the contents of this report by third parties.

The extent of any asbestos or suspected asbestos stated within this report is approximate and given for general guidance only.

Where we are unable to gain access to an area within a building following requests to the client for access or if gaining access would involve causing unacceptable levels of damage we state that these areas should be treated as if they contain asbestos until it can be proven otherwise.

# IMPORTANT POINTS TO NOTE RELATING TO THIS SURVEY AND REPORT (CONT.)

Limited inspections of insulated pipework and plant have been made. We have not removed all non-asbestos insulation to facilitate inspection. We have only investigated strategic areas of these items.

We have not inspected areas which may exist behind, above or attached to materials which we suspect may contain asbestos.

We recommend therefore that persons subsequently working in these areas are advised of the possibility that asbestos may exist and to exercise caution when breaking through materials that have previously been tested and proven to be negative for asbestos content.

This report can only relate to the situation on the day the survey took place. It does not take into account changes that may have occurred since the survey took place.

Samples have only been taken to materials which are likely to contain asbestos or which may be mistaken as asbestos due to its appearance. The report contains findings based upon both visual inspection and analysis of samples.

The table below gives guidance to the timeframe in which the priority levels should be adhered to.

| Priority | Recommended Timeframe   |
|----------|-------------------------|
| High     | Immediate               |
| Medium   | 1 — 3 Weeks             |
| Low      | Within a 6 Month Period |

The table below gives further information regarding recommended actions for asbestos products.

| Recommendation               | Further notes regarding recommended action                                                |
|------------------------------|-------------------------------------------------------------------------------------------|
| Encapsulate                  | Use suitable encapsulate application to seal surface of material.                         |
| Protect/Enclose              | Use suitable material to protect/enclose ACM to minimise risk of impact damage            |
| Remove                       | Work with this material to be carried out in accordance with The Control of Asbestos      |
|                              | Regulations (2012). All waste to be disposed of in accordance with the Hazardous Waste    |

#### Product Type:

- 1 Asbestos reinforced composites (plastics, resins, mastics, roofing felt, vinyl floor tiles, semi-rigid paints or decorative finishes, asbestos cement etc.)
- 2 AIB, millboards, other low density insulating boards, asbestos textiles, gaskets, ropes and woven textiles, asbestos paper
- 3 Thermal insulation (e.g. pipe and boiler lagging), sprayed asbestos, loose asbestos, asbestos mattresses and packing.

  Priority Score (A+B+C+D) = (1-6 Low) (7-9 Medium) (=10 High)

## Extent of Damage/Deterioration:

- O Good condition: no visible damage.
- 1 Low damage: A few scratches or surface marks, broken edges on boards, tiles etc.
- 2 Medium Damage: Significant breakage of materials or several small areas where material has been damaged
- 3 High Damage or Delamination of Materials: Sprays and thermal insulation. Visible Asbestos Debris

#### Surface Treatment:

- **0** Composite materials containing asbestos: reinforced plastics, resins, vinyl tiles
- 1 Enclosed sprays and lagging, AIB (with exposed face painted or encapsulated) asbestos cement sheets etc.
- 2 Unsealed AIB or encapsulated lagging and sprays
- 3 Unsealed lagging and sprays

- 1 Chrysotile
- 2 Amphibole asbestos excluding crocidolite
- 3 Crocidolite

| Easily disturbed   | 1                             | 3                               | 1                    | 1                                     | 6 | Low            | Remove        |  |

#### Product Type:

- 1 Asbestos reinforced composites (plastics, resins, mastics, roofing felt, vinyl floor tiles, semi-rigid paints or decorative finishes, asbestos cement etc.)
- 2 AIB, millboards, other low density insulating boards, asbestos textiles, gaskets, ropes and woven textiles, asbestos paper
- 3 Thermal insulation (e.g. pipe and boiler lagging), sprayed asbestos, loose asbestos, asbestos mattresses and packing.

  Priority Score (A+B+C+D) = (1-6 Low) (7-9 Medium) (=10 High)

#### Extent of Damage/Deterioration:

- O Good condition: no visible damage.
- 1 Low damage: A few scratches or surface marks, broken edges on boards, tiles etc.
- 2 Medium Damage: Significant breakage of materials or several small areas where material has been damaged
- 3 High Damage or Delamination of Materials: Sprays and thermal insulation. Visible Asbestos Debris

#### Surface Treatment:

- **0** Composite materials containing asbestos: reinforced plastics, resins, vinyl tiles
- 1 Enclosed sprays and lagging, AIB (with exposed face painted or encapsulated) asbestos cement sheets etc.
- 2 Unsealed AIB or encapsulated lagging and sprays
- 3 Unsealed lagging and sprays

- 1 Chrysotile
- 2 Amphibole asbestos excluding crocidolite
- 3 Crocidolite

#### Product Type:

- 1 Asbestos reinforced composites (plastics, resins, mastics, roofing felt, vinyl floor tiles, semi-rigid paints or decorative finishes, asbestos cement etc.)
- 2 AIB, millboards, other low density insulating boards, asbestos textiles, gaskets, ropes and woven textiles, asbestos paper
- 3 Thermal insulation (e.g. pipe and boiler lagging), sprayed asbestos, loose asbestos, asbestos mattresses and packing.

  Priority Score (A+B+C+D) = (1-6 Low) (7-9 Medium) (=10 High)

## Extent of Damage/Deterioration:

- O Good condition: no visible damage.
- 1 Low damage: A few scratches or surface marks, broken edges on boards, tiles etc.
- 2 Medium Damage: Significant breakage of materials or several small areas where material has been damaged
- 3 High Damage or Delamination of Materials: Sprays and thermal insulation. Visible Asbestos Debris

#### Surface Treatment:

- **0** Composite materials containing asbestos: reinforced plastics, resins, vinyl tiles
- 1 Enclosed sprays and lagging, AIB (with exposed face painted or encapsulated) asbestos cement sheets etc.
- 2 Unsealed AIB or encapsulated lagging and sprays
- 3 Unsealed lagging and sprays

- 1 Chrysotile
- 2 Amphibole asbestos excluding crocidolite
- 3 Crocidolite

#### Product Type:

- 1 Asbestos reinforced composites (plastics, resins, mastics, roofing felt, vinyl floor tiles, semi-rigid paints or decorative finishes, asbestos cement etc.)
- 2 AIB, millboards, other low density insulating boards, asbestos textiles, gaskets, ropes and woven textiles, asbestos paper
- 3 Thermal insulation (e.g. pipe and boiler lagging), sprayed asbestos, loose asbestos, asbestos mattresses and packing.

  Priority Score (A+B+C+D) = (1-6 Low) (7-9 Medium) (=10 High)

#### Extent of Damage/Deterioration:

- O Good condition: no visible damage.
- 1 Low damage: A few scratches or surface marks, broken edges on boards, tiles etc.
- 2 Medium Damage: Significant breakage of materials or several small areas where material has been damaged
- 3 High Damage or Delamination of Materials: Sprays and thermal insulation. Visible Asbestos Debris

#### Surface Treatment:

- **0** Composite materials containing asbestos: reinforced plastics, resins, vinyl tiles
- 1 Enclosed sprays and lagging, AIB (with exposed face painted or encapsulated) asbestos cement sheets etc.
- 2 Unsealed AIB or encapsulated lagging and sprays
- 3 Unsealed lagging and sprays

- 1 Chrysotile
- 2 Amphibole asbestos excluding crocidolite
- 3 Crocidolite

# Product Type:

- 1 Asbestos reinforced composites (plastics, resins, mastics, roofing felt, vinyl floor tiles, semi-rigid paints or decorative finishes, asbestos cement etc.)
- 2 AIB, millboards, other low density insulating boards, asbestos textiles, gaskets, ropes and woven textiles, asbestos paper
- 3 Thermal insulation (e.g. pipe and boiler lagging), sprayed asbestos, loose asbestos, asbestos mattresses and packing.

  Priority Score (A+B+C+D) = (1-6 Low) (7-9 Medium) (=10 High)

## Extent of Damage/Deterioration:

- O Good condition: no visible damage.
- 1 Low damage: A few scratches or surface marks, broken edges on boards, tiles etc.
- 2 Medium Damage: Significant breakage of materials or several small areas where material has been damaged
- 3 High Damage or Delamination of Materials: Sprays and thermal insulation. Visible Asbestos Debris

#### Surface Treatment:

- **0** Composite materials containing asbestos: reinforced plastics, resins, vinyl tiles
- 1 Enclosed sprays and lagging, AIB (with exposed face painted or encapsulated) asbestos cement sheets etc.
- 2 Unsealed AIB or encapsulated lagging and sprays
- 3 Unsealed lagging and sprays

- 1 Chrysotile
- 2 Amphibole asbestos excluding crocidolite
- 3 Crocidolite

#### Product Type:

- 1 Asbestos reinforced composites (plastics, resins, mastics, roofing felt, vinyl floor tiles, semi-rigid paints or decorative finishes, asbestos cement etc.)
- 2 AIB, millboards, other low density insulating boards, asbestos textiles, gaskets, ropes and woven textiles, asbestos paper
- 3 Thermal insulation (e.g. pipe and boiler lagging), sprayed asbestos, loose asbestos, asbestos mattresses and packing.

  Priority Score (A+B+C+D) = (1-6 Low) (7-9 Medium) (=10 High)

#### Extent of Damage/Deterioration:

- O Good condition: no visible damage.
- 1 Low damage: A few scratches or surface marks, broken edges on boards, tiles etc.
- 2 Medium Damage: Significant breakage of materials or several small areas where material has been damaged
- 3 High Damage or Delamination of Materials: Sprays and thermal insulation. Visible Asbestos Debris

#### Surface Treatment:

- **0** Composite materials containing asbestos: reinforced plastics, resins, vinyl tiles
- 1 Enclosed sprays and lagging, AIB (with exposed face painted or encapsulated) asbestos cement sheets etc.
- 2 Unsealed AIB or encapsulated lagging and sprays
- 3 Unsealed lagging and sprays

- 1 Chrysotile
- 2 Amphibole asbestos excluding crocidolite
- 3 Crocidolite

# REGISTER OF NEGATIVELY SAMPLED OR PRESUMED NEGATIVE ITEMS AND AREAS

Date: 27th February 2025

Survey Reference: J089702REV1

No negative materials were sampled within the scope of the survey.

#### Material Assessment Algorithm

#### Product Type:

1 Asbestos reinforced composites (plastics, resins, mastics, roofing felt, vinyl floor tiles, semi-rigid paints or decorative finishes, asbestos cement etc.)

2 AIB, millboards, other low density insulating boards, asbestos textiles, gaskets, ropes and woven textiles, asbestos paper etc.

3 Thermal insulation (e.g. pipe and boiler lagging), sprayed asbestos, loose asbestos, asbestos mattresses and packing.

Priority Score (A+B+C+D) = (1-6 Low) (7-9 Medium) (=10 High)

#### Extent of Damage/Deterioration:

O Good condition: no visible damage.

Low damage: A few scratches or surface marks, broken edges on boards, tiles etc.

2 Medium Damage: Significant breakage of materials or several small areas where material has been damaged 3 High Damage or Delamination of Materials: Sprays and

thermal insulation. Visible Asbestos Debris

#### Surface Treatment:

0 Composite materials containing asbestos: reinforced plastics, resins, vinyl tiles

1 Enclosed sprays and lagging, AIB (with exposed face painted or encapsulated) asbestos cement sheets etc.

2 Unsealed AIB or encapsulated lagging and sprays

3 Unsealed lagging and sprays

# Asbestos Type:

1 Chrysotile

2 Amphibole asbestos excluding crocidolite

3 Crocidolite

Authorisation by another member of staff is to confirm that the analysis was undertaken in accordance with in-house auality/technical procedures, current HSG248 auidance and by a suitably

Samples have been analysed to determine the presence of asbestos fibres using Casa Environmental Services Ltd's "in house" method of polarised light microscopy and central stop dispersion staining based on HSG248. Where the site address and sample locations have been provided by the client, Casa Environmental Services Ltd is not responsible for the accuracy or competence of these details or of the sampling techniques that have been used, and that results apply to the samples as they are received. Any sampling undertaken by Casa Environmental Services Ltd operatives has been undertaken using "in house" documented procedures which are based on guidance set out within HSG Guidance books HSG264 & HSG248.

Authorisation by another member of staff is to confirm that the analysis was undertaken in accordance with in-house quality/technical procedures, current HSG248 guidance and by a suitably qualified analyst.

Samples have been analysed to determine the presence of asbestos fibres using Casa Environmental Services Ltd's "in house" method of polarised light microscopy and central stop dispersion staining based on HSG248. Where the site address and sample locations have been provided by the client, Casa Environmental Services Ltd is not responsible for the accuracy or competence of these details or of the sampling techniques that have been used, and that results apply to the samples as they are received. Any sampling undertaken by Casa Environmental Services Ltd operatives has been undertaken using "in house" documented procedures which are based on guidance set out within HSG Guidance books HSG264 & HSG248.
